Sequence 14, Application US/09530139

Patent No. 6670453

GENERAL INFORMATION:

APPLICANT: FRENKEN, LEON GERARDUS

APPLICANT: LEDEBOER, ADRIANUS MARINUS

APPLICANT: LEDEBOER, ADRIANUS MARINUS

APPLICANT: VAN DER LOGT, CORNELIS PAUL

TITLE OF INVENTION: MULTIVALENT ANTIGEN-BINDING PROTEINS

FILE REFERENCE: 60113/268075/ASH

CURRENT APPLICATION NUMBER: DC7/EP98/06991

PRIOR APPLICATION NUMBER: PC7/EP98/06991

PRIOR FILING DATE: 1998-10-27

PRIOR FILING DATE: 1998-10-27

MUMBER OF SEQ ID NOS: 77

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 6, Application US/08739401A

                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 637, Application US/09839542B;
Sequence 637, Application US/09839542B;
Patent No. 656996
GENERAL INFORMATION:
APPLICANT: Blaschuk, Orest W.
APPLICANT: Symonds, James Matthew
APPLICANT: Gour, Barbara J.
TITLE OF INVENTION: CADPOUNDS AND METHODS FOR MODULATING NONCLASSICAL TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS
FILE REFERENCE: 100086.407D1
CURRENT APPLICATION NUMBER: US/09/839,542B
CURRENT FILING DATE: 2001-04-20
NUMBER OF SEQ ID NOS: 4052
SOFTWARE: Patentin Ver. 2.0

amino acid residues of the first segment, together with an additional
amino acid residue(s), adjacent to the first amino acid sequence. The
beta-sheets and disulphide bridges of a polypeptide are determined by
identifying a superstructure encompassing alternative beta-strand
arrangements, representing the superstructure by an integer-linear
contact energy, and then solving the model. The method can
also apply energy modelling with a full atom force field potential to
generate a constrained global optimisation problem, optionally applying a
corptimisation problem to determine the three-dimensional structure of the
polypeptide and is useful for determining the tertiary structure
of a polypeptide and is accurate and reliable. The sequences presented in
ABU12184-ABU122235 are the pentapeptides of the Streptomyces griseus
immunoglobulin-binding domain from streptococcal protein G, 1GB1, which
were used to predict the alpha-helical regions in an example of the
constrains and securate and reliable. The area example of the
method of the invention

New multimer of single-chain antibodies, useful e.g. for diagnosis drug delivery, has four variable chains linked through peptides of controlled length.

Example 1; Fig 2B; 16pp; German.

This invention describes a novel multimer containing at least two antibodies, each, independently, comprising a polypeptide chain of structure V1-PA-V2-PM-V3-PB-V4 where V1-V4 = variable domains; PA, PB and PM = peptide linkers with PA and PB containing 0 or 1 amino acid. The

The method comprises defining the first segment of the amino acid sequence, performing atomistic modelling upon each segment, generating an ensemble of low energy conformations, determining the entropic and free energy for each segment and then ascertaining the equilibrium probabilities for helical clusters. The segments consist of pentapeptides, with each further segment including a majority of the
products of the invention have cytostatic activity. The multimers described can be used for diagnostic detection, in essentially standard immunoassay methods, and for binding at least one component and/or fused protein or peptide to a cell, especially to deliver a toxin or for infection, transformation or transfection of the cell. (I), or nucleic treating tumours. The multimers are relatively small (about 110 kDa for dimer) but have multiple binding sites to ensure high binding affinity. This sequence represents a fragment of the single chain diabody CEAGal (composed of a tumour marker carcinoembryonic antigen fragment and E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Streptococcal protein G, 1GB1, alpha helix prediction pentapeptide #51.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ASTRO-FOLD; ab anitio; alpha-helix; beta-sheet; disulphide bridge; atomistic modelling; low energy conformation; entropic energy; free energy; equilibrium probability; helical cluster; integer-linear; mathematical model; hydrophobic contact energy; atom force field potential; global optimisation; torsion angle; dynamic algorithm; three-dimensional structure; tertiary structure; immunoglobulin-binding domain; protein G; 1GB1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Determining helix regions, and beta sheets of polypeptide, involves partitioning peptide, atomistic modeling by selected force, generating ensemble low energy, and calculating free energies for each peptide.

                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                                                                                                                 ö
                                                                                                                       ABR55412-20 represent conserved region of a phospholipase C (PLC)-zeta polypeptide. PLC-zeta polypeptides are capable of triggering calcium oscillations in oocytes. The PLC-zeta isoform is expressed specifically in mammalian sperm, and is an essential protein for mammalian fertilisation and embryo development. PLC-zeta polynucleotides are useful for preparing a composition for diagnosing or treating infertility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                An isolated antibody has been developed which binds specifically to cytotoxic lymphocyte maturation factor (CLMF) and neutralises CLMF induced proliferation by more than 50% in a CLMF dependent T cell growth assay and/or inhibits binding of at least 60% of the factor to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytotoxic lymphocyte maturation factor; CLMF; cytokine; synergize; interleukin 2; IL-2; human; lymphoblastoid cell; detection; purifying; proliferation; cytotoxic T cell; transplantation; antibody.
                                                          New phospholipase C-zeta gene, useful for preparing a composition for diagnosing or treating infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antibodies to cytotoxic lymphocyte maturation factor - useful for detecting, purifying, and/or blocking proliferation and activation of cytotoxic T cells, such as in transplantation(s).
                                                                                                                                                                                                                                                                 Gaps

phytohaemagglutinin (PHA) activated peripheral blood lymphocyte (PBL) blasts as determined in a CLMF receptor binding assay. CLMF is a heterodimeric protein having a molecular weight band of 75 kD, determined by sodium dodecyl sulphate-polyacrylamide gel electrophoresis (SDS-PAGE) under non-reducing and/or reducing conditions, providing a first subunit having a molecular weight band of 40 kD and a second subunit having a molecular weight band of 40 kD and a second subunit having a molecular weight of 35 kD. The present sequence represents a tryptic 40 kD CLMF peptide off polyvinylidene diflucinde (PVDF), from an example of the present invention. The antibody can be used for the purification and/or detection of CLMF. It is also used in therapeutic treatments which require selective blocking of proliferation and activation of cytotoxic T cells (CTLs) such as in transplantation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin, cadherin-5; cadherin-6; cadherin-7; cadherin-8; cadherin-12; cadherin-14; cadherin-15; T-cadherin; PB-cadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; desmoclein; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to diagnosing the presence of colon cancer, metastases of colon cancer, staging colon cancer, monitoring colon cancer for the onset of metastasis or monitoring a change in stage of colon cancer in a patient. The method involves determining a colon specific gene (CSG) in cells, tissues or bodily fluids and comparing it with levels of CSG in cells, tissues or bodily fluids from a normal human control. Colon cancer can be treated by administering a molecule which down regulates the expression or activity of CSG. An immune response against a target cell expressing CSG can be induced by delivering an immune response is mounted. Therapeutic agents are useful for imaging an immune response is mounted. Therapeutic agents are useful for imaging colon cancer in a patient by administering an agent labelled with paramagnetic ions or a radioisotope to the patient. They are also useful for preventing the onset of colon cancer, and in diagnosis and treatment of the disease. Sequences AAU85424-AAU85502 represent human colon specific protein antibody binding sites used in the method of the

Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 6 beta-strands. The scaffold protein is constructed of beta strands S1-S6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands

form two beta sheets $1/$4/$3 and $6/$5/$2 with each strand connected to
the next by hydrogen bonds, which generate a beta sandwich architecture.

If the additional beta strands Al-A3 are included in the structure the
scaffold is constructed of two beta sheets, with the structures the
conformation and $6/$5/$2/$2/$3. The beta strands are connected to each
other via amino acid loops, where at least one of the loops binds to a
receptor or antigen. The scaffold protein is used to stabilize antigens
or whole proteins such as receptors, or their fragments. It may be used
to bind two separate molecules. For example, one surface of the scaffold
may be bound to a protein which binds to a tumour antigen. This will
carpet the complex to tumour cells. Another surface may be bound to a
cytotoxic molecule or an autoimmune antibody which may then kill the
tumour cells. Therefore the scaffold protein may be used to target
chemotherapeutic agents to specific cells. It may also be used to
stabilize individual peptides in a peptide library and may be used in
diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain.                                                                                                                                                                                                                                                                                                                                                                                                                                       дq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                           The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of
                                                                                                                                                                                                                                                                     Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Scaffold protein; beta strand; beta sheet; stabilize antigen; vaccine; tumour; chemotherapeutic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40605) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 6 beta-strands. The scaffold protein is constructed of beta strands S1-S6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands of the next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands A1-A3 are included in the structure the scaffold is constructed of two beta sheets, with he structures of scaffold is constructed of two beta sheets, with the structure of scaffold is constructed of two beta strands are connected to each other via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens or whole proteins which hinds to a tumour antigen. This will the complex to tumour cells. For example, one surface may be bound to a protein which hinds to a tumour antigen. This will the tumour cells. Therefore the scaffold protein may then kill the contour cells. Therefore the scaffold protein may be used to target the complex to specific cells. It may also be used in the stabilize individual peptides in a peptide library and may be used in the stabilize antigens used as vaccines
New scaffold protein, useful for stabilizing antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human, CTLA-4, scaffold protein, antigen-binding, receptor-binding, SCA domain, cancer, thrombosis, osteoporosis, rheumatoid arthritis; diabetic retinopathy, atherosclerosis.

ö
or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold may be bound to a protein which binds to a tumour antigen. This will target the complex to tumour cells. Another surface may be bound to a cytotoxic molecule or an autoimmune antibody which may then kill the tumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to specific cells. It may also be used to stabilize individual peptides in a peptide library and may be used in diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                         Gaps

Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 6 beta-strands. The scaffold protein is constructed of beta strands S1-S6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands of the next by hydrogen bonds, which generate a beta sandwich architecture. Cc functionally equivalent derivative of these sequences. The beta strands of the next by hydrogen bonds, which generate a beta sandwich architecture. Cc the next by hydrogen bonds, which generate a beta sandwich architecture. Cc the next by hydrogen bonds, which generate a beta sandwich architecture. Cc the additional beta strands A1-A3 are included in the structure the scaffold is constructed of two beta sheets, with the structure the caffold is constructed of two beta sheets, with ene structures. A1/S1/S4/S3 and S6/S5/S2/A2/A3. The beta strands are connected to other via amino acid loops, where at least one of the loops binds to a receptor or antigens. The scaffold protein is used to stabilize antigens to bind two separate molecules. For example, one surface of the scaffold connected to complex to tumour cells. Therefore the scaffold protein may be used to target tumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to a peptide library and may be used in cynther surface individual peptides in a peptide library and may be used in cynthers antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Sequence 7 AA;

The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of the invention

Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.

(INNO-) INNOGENETICS NV.

New scaffold protein, useful for stabilizing antigens used as vaccines. Disclosure; Page 6; 105pp; English. Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-12 beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-12 beta strand peptide bond, contains less than 10% alpha helix and contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 6 beta-strands. The scaffold protein is constructed of beta strands S1-S6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands form two beta sheets S1/S4/S3 and S6/S5/S2 with each strand connected to the next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands A1-A3 are included in the structure the scaffold is constructed of two beta sheets, with the structures A1/S1/S4/S3 and S6/S5/S2/A2/A3. The beta strands are connected to each other via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold is used to stabilize antigens

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description

Eur. J. Biochem. 250:727-734(1997).
-!- FUNCTION: May act as a neurotransmitter or neuromodulator.
-!- SIMILARITY: Belongs to the allatostatin family.
Neuropeptide; Amidation; Multigene family.

-! - CATALYTIC ACTIVITY: Dethiobiotin + sulfur = biotin.
-! - CATALYTIC ACTIVITY: Dethiobiotin + sulfur = biotin.
-! - SIMILARITY: Belongs to the biotin and lipoic acid synthetases family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQUENCE 5 AA; 532 MW; 75A5B1EDD6F00000 CRC64;

Phytosulfokine-alpha (PSK-alpha) [Contains: Phytosulfokine-beta (PSK-

embryos.
-!- SUBCELLULAR LOCATION: Secreted.
-!- PIM: Sulfation is important for activity and for the binding to putative membrane receptor (By similarity).
-!- SIMILARITY: Belongs to the phytosulfokine family.
Growth factor; Sulfation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         STRAIN=cv. "A secreted peptide growth factor, phytosulfokine, acting as a
stimulatory factor of carrot somatic embryo formation.";
Plant Cell Physiol. 41:27-32(2000).
-!- FUNCTION: In presence of 2,4-D, stimulates proliferation of the
cells, but does not stimulate differentiation into the somatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .;

"The structure of new peptides from the Australin red tree frog
'Litoria rubella'. The skin peptide profile as a probe for the study
of evolutionary trends of amphibians.";
Aust. J. Chem. 49:955-963(1996).
-!- FUNCTION: Shows neither neuropeptide activity nor antibiotic
activity.
-!- SUBCELULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the skin dorsal glands.
-!- MASS SPECTROMETRY: MW=655; METHOD=FAB.
Amphibian defense peptide; Amidation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

cytochrome-c oxidase (EC 1.9.3.1) chain I [imported] - river lamprey mitochondrior C; Species: mitochondrion Lampetra fluviatilis (river lamprey)
C; Date: 15-Jun-2001 #sequence_revision 15-Jun-2001 #text_change 15-Jun-2001
C; Accession: T13892
R; Delarbre, C.; Barriel, V.; Tillier, S.; Janvier, P.; Gachelin, G.
Mol. Biol. Evol. 14, 807-813, 1997
A; Title: The main features of the craniate mitochondrial DNA between the NDI and t A; Reference number: Z17775; MUD: 97398704; PMID: 9254918
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       flagellar protein flik - Salmonella typhimurium (fragment)

GENERAL INFORMATION:
APPLICANT: Oliver, Cynthia
APPLICANT: Allan, Christian
APPLICANT: Chang, Stephen
TITLE OF INVENTION: STABILIZED ANTI-RESPIRATORY SYNCYTIAL VIRUS (RSV) ANTIBODY FORM
TILE REFERENCE: 10271-071-999
CURRENT APPLICATION NUMBER: US/10/461,863
CURRENT FILING DATE: 2003-06-13
PRIOR APPLICATION NUMBER: 60/388,920
PRIOR FILING DATE: 2002-06-14

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 164, 32

Sequence 164, 32

Sequence 164, 32

Patent No. US_0020177126A1

GENERAL INFORMATION:

APPLICANT: Young, James

APPLICANT: Scott, Koenig

APPLICANT: Leslie, Johnson

TITLE OF INVENTION: Methods of Adminstering/Dosing Anti-RSV Antibodies for Prophylaxi

TITLE OF INVENTION: and Treatment

FILE REFERENCE: 10271-047-999

CURRENT APPLICATION NUMBER: US/09/996,288

CURRENT FILING DATE: 2001-11-28

NUMBER OF SEQ ID NOS: 259

SOFTWARE: PatentIn version 3.1

SEQ ID NO 164

LENGTH: 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 164, Application US/09996265

GENERAL INFORMATION:

APPLICANT: Botstein, David

APPLICANT: Palzkill, Timothy

TITLE OF INVENTION: Methods for modifying DNA and for

TITLE OF INVENTION: Methods for modified polypeptides with target substrates.

TITLE OF INVENTION: encoded modified polypeptides with target substrates.

TITLE OF INVENTION: Methods for modified polypeptides with target substrates.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 20, Application US/08753750B

Patent No. 6610506

GENERAL INFORMATION:

APPLICANT: Lo, Reggie Y.C.

APPLICANT: Schryvers, Anthony B.

APPLICANT: Schryvers, Andrew A.

TITLE OF INVENTION: FASTEURELLA HAEMOLYTICA AND VACCINES CONTAINING THE SAME FILE REFERENCE: A34762 021645.0105

CURRENT APPLICATION NUMBER: US/08/753,750B

CURRENT APPLICATION NUMBER: C2,164,274

PRIOR APPLICATION NUMBER: 60/008,569

PRIOR PILING DATE: 1995-12-01

PRIOR PILING DATE: 1995-12-01

PRIOR PILING DATE: 1995-12-01

NUMBER OF SEQ ID NOS: 68

SOFTWARE: FastSEQ for Windows Version 4.0

LENGTH: 7

TYPE: PRT
                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                         US-09-657-474-78

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Structure of cCF10, a peptide sex pheromone which induces conjugative transfer of the Streptococcus faecalis tetracycline resistance plasmid, pCF10.";

J. Biol. Chem. 263:14574-14578 (1988).

-! FUNCTION: CCF10 IS INVOLVED IN THE CONJUGATIVE TRANSFER OF THE HEMOLYSIN PLASMID PCF10.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-OCT-1994 (Rel. 30, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "Isolation and identification of multiple neuropeptides of the allatostatin superfamily in the shore crab Carcinus maenas.";
Eur. J. Biochem. 250:727-734 (1997).
-!- FUNCTION: May act as a neurotransmitter or neuromodulator.
-!- SIMILARITY: Belongs to the allatostatin family.
Neuropeptide; Amidation; Multigene family.

Pernollet J.-C., Zivy M., de Vienne D.;
"The maize two dimensional gel protein database: towards an integrated genome analysis program.";
Theor. Appl. Genet. 93:997-1005(1996).
-!- MISCELLANEOUS: On the 2D-gel the determined pI of this unknown protein is: 6.1, its Mw is: 30.4 kba.
Maize-2DPAGE; P80628; COLEOPTILE.
Maize-DB; 123954; -. .
-!- SUBCELLULAR LOCATION: Secreted.
-!- PTM: Sulfation is important for activity and for the binding to a putative membrane receptor (By similarity).
-!- SIMILARITY: Belongs to the phytosulfokine family.
Growth factor; Sulfation.
PEPTIDE 1 4 SULFATION.
MOD_RES 3. 3 SULFATION.
